## Data Sheet - Fully Automated Backup as a Service

Backup as a service (BaaS) is an approach to backing up data to an online data backup provider. Rather than performing backups to an on-premises IT system, BaaS connects a company's business system data to a data centre managed by an experienced, secure and focussed provider.

Exel are now able to offer our clients a fully automated cloud backup facility for their EFACS/Eagle data, rather than just using a local backup system.

Backup as a Service (BaaS) provides comprehensive data protection to meet all of your operational requirements.

Whether you are a single site or multi-site installation, BaaS has you covered.

We will ensure your data is automatically stored securely and seamlessly in the datacentre, this will ensure 100% up-time and accessibility. Thereby reducing your time, cost, infrastructure reinvestment; and in the event of a crisis, allows immediate access to your backups without disrupting your day-to-day operations.

Benefits of Cloud Backup

- **Cost Reduction**

    Eliminates on-site backup e.g. disk, tape, etc.

    Reduces requirements on internal IT resources

- **Security**

    Data is held off-site in secure datacentres

- **Fully automated backup procedures**

- **Recovery from online backups is simple and rapid**

- **Fully scalable**

    Only pay for the storage you need

- **Increased peace of mind**

Cost & Set-up

There is an initial setup fee of £500. This includes a planning discussion, to identify what and how frequently to backup; configuration of the automated backups and training on the portal on how to review backups, retrieve files and then advice on how to perform the restoration.

You can backup just the EFACS/ Eagle databases or the databases and the EFACS filesystem.

Ongoing costs are based on the amount of storage required.

An example plan would be: Keep one backup for last year, one per month for the current year, and in the current month keep a weekly backup and a backup of the last 3 days.

10GB Database Pricing Example

- 10GB Database
- The filesystem (typically 5GB)
- **The price per month = £24.48**

60GB Database Pricing Example

- 60GB Database
- The filesystem (typically 5GB)
- **The price per month = £33.72**

Summary

Backup as a Service (BaaS) offers fully automated protection for your data across a wide-range of backup scenarios, delivered by Exel, who have been providing business software solutions and the protection/ storage of data for over three decades.
